# IT Health Check

Comprehensive Review of Your Current IT Operations

Benefits:

- Clear understanding of the health of your IT operations

- Generate a task list to meet goals

- Make smarter decisions regarding future IT investments

- Use the results to create next steps towards effective improvement

What is an IT Health Check?

A BMT IT Health Check is an analysis that examines your current IT operations and provides a detailed overview of technical strengths and weaknesses. We'll examine and report on a number of important issues, including system and network performance, hardware performance, system security, external vulnerabilities, and more.

Program Features

Thorough Evaluation

3-4 hour on-site analysis of your chosen systems and network.

In–Depth Analysis

IT Health Check score card is created for your chosen systems. Areas of review include: Backup, DR, Security, Email, Servers, Desktop, Mobility, Communications, Server Room, and Applications.

Comprehensive Follow Up

A BMT IT Advisor will meet with you for a 1-2 hour interactive review to discuss the results. Your options will be discussed and your environment rescored based upon feedback and unique business priorities.
